what we do in analysis. Suppose next we really wish to prove the equality $x = 0$. In analysis, we prove two inequalities: $x < 0$ and $x > 0$. To prove the inequality $x < 0$, we prove $x < -\epsilon$ for all positive ϵ . To prove the inequality $x > 0$, we prove $x > \epsilon$ for all positive ϵ . The term real analysis is a little bit of a misnomer.

Solution: Let $\epsilon > 0$ be given, and consider for each $x \in K$ the set $B(x, \epsilon)$. This is clearly open since it is an open ball. Also note that $\{B(x, \epsilon) : x \in K\}$ is an open cover of K .

Online Library Introduction To Real Analysis Solution Chegg

Since K is compact, we have that this open cover has a finite subcover, and so there exists a finite set $T \subset K$ such that $K \subset \bigcup_{x \in T} B(x)$. Thus, we have that K is totally bounded.
